

# MR. ROBOT

1. This is a steganography challenge, the website that performs the steganography is linked usually these websites have a decoding part to the website below. Also it seems to be a picture with text inside that is apparently the flag so go to the site and see if there is a decode mechanism for this.

2. When the JPEG is downloaded there is no text shown on the photo, steganography is a technique that hides secret information within ordinary files so for example in this one there is text hidden inside the JPEG photo.

- As shown below this website does have a decode option so lets use that to decode the secret message from the JPEG.

The following pages use steganography techniques to hide secret information invisibly in an image or audio file. They modify the least-significant bits of the pixels in an image, or add "noise" to audio samples to hide information.

The best way to protect the privacy of your private communications is to make it hard to determine that any private communications are taking place! After all, you're just mailing pictures of funny kittehs!!!

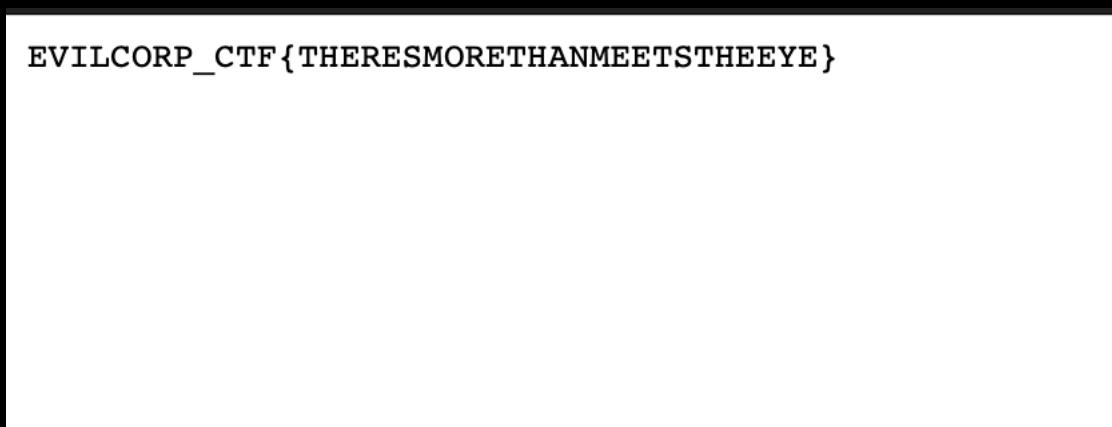

- [Encode an image.](#)
- [Decode an image.](#)
- [Compare two images.](#)

These pages use the `steghide` program to perform steganography, and the files generated are fully compatible with steghide. If you really want to be secure, or do brute-force attacks, you'll want to use these programs on your own system.

Please send comments or questions to [Alan Eliasen](#).

[Back to Alan's Home Server](#)

- Then get prompted to choose a file so choose the JPEG downloaded and click submit and try decode it without a password. When submit is pressed , the flag for this challenge should show like the picture below.

- Put the flag in on the challenge and move on to the next.

Challenge      0 Solves      X

## Hidden Text

200

There's more to this picture. Looks like the website <https://futureboy.us/stegano/> was used to encode a message in the picture. Do you see the text. Wait, can I even trust you?

Syntax is the text hidden
